24 issues with duplicate title tags	24
About this issue: Our crawler reports pages that have duplicate title tags only if they are exact matches. Duplicate <title> tags make it difficult for search engines to determine which of a website's pages is relevant for a specific search query, and which one should be prioritized in search results. Pages with duplicate titles have a lower chance of ranking well and are at risk of being banned. Moreover, identical <title> tags confuse users as to which webpage they should follow.	0
How to fix: Provide a unique and concise title for each of your pages that contains your most important keywords. For information on how to create effective titles, please see this Google article . You can also view the On-Page SEO Basics: Meta Descriptions article	
12 pages have duplicate meta descriptions	12
About this issue: Our crawler reports pages that have duplicate meta descriptions only if they are exact matches. A <meta description> tag is a short summary of a webpage's content that helps search engines understand what the page is about and can be shown to users in search results. Duplicate meta descriptions on different pages mean a lost opportunity to use more relevant keywords. Also, duplicate meta descriptions make it difficult for search engines and users to differentiate between different webpages. It is better to have no meta description at all than to have a duplicate one.	0
How to fix: Provide a unique, relevant meta description for each of your webpages. For information on how to create effective meta descriptions, please see this Google article . You can also view the On-Page SEO Basics: Meta Descriptions article

11 pages have duplicate content issues About this issue: Webpages are considered duplicates if their content is 85% identical. Having duplicate content may significantly affect your SEO performance. First of all, Google will typically show only one duplicate page, filtering other instances out of its index and search results, and this page may not be the one you want to rank. In some cases, search engines may consider duplicate pages as an attempt to manipulate search engine rankings and, as a result, your website may be downgraded or even banned from search results. Moreover, duplicate pages may dilute your link profile. How to fix: Here are a few ways to fix duplicate content issues: - Add a rel="canonical" link to one of your duplicate pages to inform search engines which page to show in search results - Use a 301 redirect from a duplicate page to the original one - Use a rel="next" and a rel="prev" link attribute to fix pagination duplicates - Instruct GoogleBot to handle URL parameters differently using Google Search Console - Provide some unique content on the webpage For more information, please read these articles: "Duplicate content" and "Consolidate duplicate URLs"	11 0

42 external links are broken

42

About this issue:

0

Broken external links lead users from one website to another and bring them to non-existent webpages. Multiple broken links negatively affect user experience and may worsen your search engine rankings because crawlers may think that your website is poorly maintained or coded.

Please note that our crawler may detect a working link as broken. Generally, this happens if the server hosting the website you're referring to blocks our crawler from accessing this website.

How to fix:

Please follow all links reported as broken. If a target webpage returns an error, remove the link leading to the error page or replace it with another resource.

If the links reported as broken do work when accessed with a browser, you should contact the website's owner and inform them about the issue.

27 pages have low text-HTML ratio

27

About this issue:

0

Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less.

Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results.

Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster.

How to fix:

Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.

12 pages don't have meta descriptions About this issue: Though meta descriptions don't have a direct influence on rankings, they are used by search engines to display your page's description in search results. A good description helps users know what your page is about and encourages them to click on it. If your page's meta description tag is missing, search engines will usually display its first sentence, which may be irrelevant and unappealing to users. For more information, please see these articles: Create good titles and snippets in Search Results and On-Page SEO Basics: Meta Descriptions How to fix: In order to gain a higher click-through rate, you should ensure that all of your webpages have meta descriptions that contain relevant keywords.	12 0
10 pages have a low word count About this issue: This issue is triggered if the number of words on your webpage is less than 200. The amount of text placed on your webpage is a quality signal to search engines. Search engines prefer to provide as much information to users as possible, so pages with longer content tend to be placed higher in search results, as opposed to those with lower word counts. For more information, please view this video How to fix: Improve your on-page content and be sure to include more than 200 meaningful words.	10 0
3 pages don't have enough text within the title tags About this issue: Generally, using short titles on webpages is a recommended practice. However, keep in mind that titles containing 10 characters or less do not provide enough information about what your webpage is about and limit your page's potential to show up in search results for different keywords. For more information, please see this Google article How to fix: Add more descriptive text inside your page's <title> tag.	3 0
3 pages have too much text within the title tags About this issue: Most search engines truncate titles containing more than 70 characters. Incomplete and shortened titles look unappealing to users and won't entice them to click on your page. For more information, please see this Google article How to fix: Try to rewrite your page titles to be 70 characters or less.	3 0

9 links have non-descriptive anchor text About this issue: The issue is triggered if the anchor text for a link (internal or external) is non-descriptive. An anchor is considered to be non-descriptive if it doesn't say what the page is about (click here, right here, etc.). This issue makes it difficult for the target page to be indexed by search engines and rank for relevant search requests. Learn more How to fix: To let users and search engines understand the meaning of the linked-to page, use succinct anchor text that describes the page's content. Learn more	9 0
llms.txt not found About this issue: The <code>llms.txt</code> file helps AI search engines better understand your website's content by providing LLM-friendly information. This file offers a short summary, guidance, and links to other useful resources. How to fix: • Create an <code>llms.txt</code> file. • Place it in your website's root directory and ensure the file is accessible. • Refer to llmstxt.org for examples and tips on how to properly create and manage it.	1 0
